Laura

I would rate this as not high priority for your review, but for what it is worth, I've attached some a supplemental material related to the AG-ICE electrification projects used in SJV federal Offset Equivalency. This material was in an earlier draft of the report, but was ultimately cut. Essentially this shows two things: (1) the emission reduction calculations from AG-ICE in greater detail and (2) that the amount of reductions the District calculated or "banked" originally was also what they used as mitigation in equivalency. Both these were contested issues early in our discussions with the District, but eventually we reached a common understanding with them so these issues were omitted from the report for that reason I think. The ADA formatting does alter the original spacing so it's a little messy.
